Introduction and Background

In general when children sleep, they should sleep with their mouth closed, breathing quietly through their nose. If this is not the case, then your child may have some component of sleep disturbance. Your observations of your child's sleep pattern will help us determine whether the "snoring" is significant and warrants further evaluation or treatment.

Parent Instructions

Please answer the questions below regarding the behavior of your child during sleep and when awake. Please watch your child sleep when in good health and answer the questions for an "average" night's sleep. Specifically, after your child has been asleep for 30-60 minutes, sit in their bedroom and observe their sleep pattern for 10-15 minutes on 5-6 separate evenings. Please circle the appropriate response:

When sleeping, on a typical night, does your child.....

Snore?	Never	Occasionally	Frequently	Always	When ill
Is it loud medium soft?					
Have loud or heavy breathing?	Never	Occasionally	Frequently	Always	When ill
