

“

No need for general anesthesia and arguably more important, no need to ask our toddler to fast before the procedure was completed! It was also much less expensive than traditional ear tubes.

Devon, Father of Tucker

”

“

It was truly the best experience I've had, and I can't imagine the amount of stress that I would have had leading up to an OR procedure. With the Hummingbird, there was no worry or stress and my son was back to normal within 5 minutes and ready to move on with his day.

Amy, Mother of Brooks

”

“

What amazed us about the Hummingbird procedure is that it required no anesthesia. This meant that our son didn't have to go through the stressful and potentially risky process of being put under. We highly encourage any family struggling with ear infections to explore the Hummingbird.

Lizzie, Mother of Elliot

”

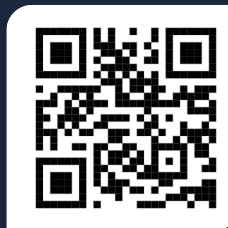

HUMMINGBIRD® TTS
PRECEPTIS MEDICAL

- ¹ Overall procedure times vary.
- ² Actual patient costs vary based on insurance plan, deductible amount, out-of-pocket maximums, co-pays and ENT provider network status. It is important to check with your ENT provider to understand all cost estimates.

A BREAKTHROUGH IN PEDIATRIC EAR TUBES

HUMMINGBIRD® TTS
PRECEPTIS MEDICAL

In-Office Ear Tube Placement
without General Anesthesia

www.hummingbirdeartubes.com

ABOUT THE HUMMINGBIRD

The Hummingbird® Tympanostomy Tube System (TTS) is a breakthrough technology that enables ENT surgeons to perform pediatric ear tube placement in the comfort of the office without general anesthesia.

The FDA-cleared Hummingbird eliminates many challenging aspects associated with traditional ear tube surgery while reducing overall costs and delivering safe and effective outcomes for children.

The Hummingbird ear tube procedure provides an alternative to surgical ear tube placement and is:

SAFE

Thousands of children have been safely and successfully treated with the Hummingbird device. Families may be present during the process, which may reduce stress for both the child and parents.

SIMPLE

The Hummingbird procedure, which is completed in minutes¹, eliminates the need for fasting, pre-operative testing and post-operative care. Children may immediately return to normal activities following treatment.

LESS EXPENSIVE

The overall costs of the Hummingbird procedure are often less than traditional surgical approaches. The procedure is shifted from higher cost facilities to a more cost-effective location, the office.

HUMMINGBIRD IN-OFFICE PROCEDURE VS. TRADITIONAL EAR TUBE SURGERY

Hummingbird In-Office Ear Tube Procedure

Topical Anesthetic

No Fasting

No Post-Operative Restrictions

Parents Present During Procedure

Cost Savings

Average Total Cost
\$1,500 - \$2,000

Traditional Ear Tube Surgery

General Anesthesia Required

Fasting Required

Full Day of Observation

Parents Unable to Comfort Child

Fees for Anesthesia and OR

Average Total Cost
\$5,500 - \$7,500

68% Up to 68% Cost Savings with the Hummingbird²

SAFETY AND EFFECTIVENESS

The Hummingbird is FDA-cleared for in-office use in children 6 months and older.³ The device has been studied extensively and has demonstrated the following performance in clinical studies.⁴

Of parents would recommend the procedure to others

Of children successfully received ear tubes in their ENT's office

Efficient, same-day procedure, immediate return to normal activity¹

Of patients acceptably tolerated the procedure, based on independent physician review
